ROBOT

- CZECH MADE WATCHES

Dear watch connoisseurs,

Discover ROBOT, the mechanical watch brand born in the Czech Republic. From the heart of Europe, where “robot” gained global fame and the Prague Astronomical Clock stands as a horological gem, our watches come alive. Join us on a journey where precision meets timeless design.

Watches and robots

It is not well known, but robots and watchmaking have been closely connected for centuries. The first predecessors of robots were the so-called automatons – machines imitating various activities of people or animals, which were then used to entertain monarchs and nobility. Their mechanics were often designed by skilled watchmakers. And it wasn't just about fun moving toys – many of the inventions in the field of watch mechanics were later applied during the industrial revolution or in modern machine and robotic production as we know it today.

Czech robot

Elon Musk might be very surprised, but the word ROBOT was first used by the Czech writer Karel Čapek more than 100 years ago and was associated with hard work. In his play R.U.R., he addressed the question of what our world might look like in the future if we created robots as soulless machines to help us. Over the years, the word has spread throughout the world and became globally known. Today, we see the possibilities that humans have actually created in the field of robotics turning fiction into reality. Robots make our lives easier in many areas of our daily lives, helping us to enjoy our time.

A passion for technology and handwork

That is why Czech entrepreneur Josef Zajíček selected the name ROBOT for the watch brand. Alongside an experienced team of designers and watchmakers, he was looking for a name for a Czech watch manufacture. Initially, it operated under the name Bohematic before expanding internationally and rebranding as ROBOT due to the similarity with another watch collection's name. Josef Zajíček started his own business in his youth and built his own company, which is still successful in the automotive industry today. He has a deep understanding of robots in the automotive industry. Over time, he developed an interest in the art of watchmaking and discovered its rich tradition in the Czech Republic.

„Čapek's vision of how robots could make our lives easier, so we don't lose time for beautiful things, is also symbolic for our watch brand," says Josef Zajíček. „People today have to use their time efficiently. The preciousness and value of time are also reflected in the noble materials that have been used in watchmaking since ancient times and in the mechanisms that are made to last for centuries. The famous Astronomical Clock in Prague is the best example of this.”

Passion for technology, handwork and craftsmanship is present every day in our manufacture in Nové Město nad Metují. In small series, attractive mechanical watches are created here with a high proportion of handwork and with high-quality Swiss movements, modified and decorated according to our requirements. Distinctive design and precise fine watchmaking, that is a ROBOT watch. A watch that makes you enjoy your time better.

Josef Zajíček

Founder

The famous Astronomical Clock in Prague

HAND MADE WATCHES

Watchmaking enjoys a long tradition in Bohemia, and it did not happen by accident. The industrial development of this part of the world in the nineteenth and early twentieth centuries was conducive to the flourishing of many areas of technical progress.

Watchmaking is a craft that combines art, design and the application of precision engineering. Czech industry achieved international fame during the Austro-Hungarian Empire and the newly established Czechoslovak state. Fortunately, a lot of the knowledge and expertise survived the following half a century of decline under the communist regime. Today, decades after the fall of communism, Czech design, typography and precision engineering are again enjoying the reputation they deserve. These are indeed very good times for the watchmaking sector. Our team comprises of an enlightened investor and several first-class designers and watchmakers. We began producing our unique ROBOT watches in Nové Město nad Metují, where we aim

for the design and technology of the twenty-first century to firmly stand on the best design and technology traditions of the past. It all started with a meeting between the investor Josef Zajíček and the designers Michal Froněk and Jan Němeček of the renowned Olgoj Chorchoj design studio based in the Libeň neighbourhood of Prague. It soon transpired that all three shared a passion for technology, craftsmanship, and old racing cars. This gave rise to a project that would restore Czech watchmaking to its rightful place. The result is ROBOT – a concept of watches built on excellent precision manufacturing and timeless design. Our watches are produced in small runs, mainly by hand, and come with an exceptional 5+3 year warranty.

For the passionate watch seeker

ROBOT is a one-of-a-kind brand whose watches are produced in small series in a small workshop in the Czech Republic, Europe. We come not just from the birthplace of the robot but also from the home of the famous astronomical clock of Prague, well known to all passionate clockwork lovers.

Courageous in design and technology

When designing a new watch, we first define the model's character. For example, the dial – technologically, it is a very demanding part to make. The starting point is creating a perfectly produced etalon piece, which is then multiplied. You can imagine the process as "growing" dials in the image of the etalon piece. And that's just the beginning. A number of decorative and finishing techniques follow – metal plating, attaching indices, and printing designs to name just a few. There are easier ways of making dials but, none of them offers as many finish options as this one.

Sweep seconds hand

The central seconds hand is not the most crucial time indicator on any watch, but we consider it one of the most attractive details. We pay it the utmost attention—from the original design to the technical drawings and the hand-finishing. Our customers who share our appreciation for the seconds hand often choose to personalize it by adding their initials or a miniature of a cherished object. When this happens, it adds a personal touch that brings us even more joy during the crafting process.

Hand-made strap

Robot watches find their perfect match in a hand-sewn leather strap crafted in the Czech Republic. Thanks to our collaboration with this leading producer, our designers can be sure that their ideas will materialise without compromises. The greatest advantage of hand-made straps is the customisation of colours, shapes, lengths and stitching details.

Customized Swiss Made movements

Working with our Swiss partners, we customize the movements individually for each model. For instance, the caliber made for the Aerodynamic model (pictured) has uniquely skeletonised bridges. The Minor model also features a custom-designed rotor and a skeletonised date wheel. We rely on Swiss caliber quality and add a ROBOT twist to it.

5 years warranty

As a testament to our commitment to quality, we provide our watches with an exceptional 5-year warranty. If the watch undergoes a standard service between the fourth and fifth year, the warranty is extended by an additional three years, totaling 8 years. This ensures that your watch is a long-term investment, and we guarantee ongoing care and support.

ROBOT IDA

The first ROBOT watch for ladies, designed by Lucie Koldová and proudly presented by philanthropist and topmodel Tereza Maxová.

ROBOT

APLOS

The elegant ROBOT Aplos model pays homage to the beauty of simplicity.

Aplos marks a new chapter for ROBOT watches as the first model to shape its own story from the start. Following the success of Graphic, Minor, and Aerodynamic—models inspired by compelling 20th Century Czechoslovakian stories—Aplos adds a moment of calm to the brand's collection. Imagine a racing car driver going to a yoga class. The ambition was to design a watch that will keep its foot off the gas. Its strength will lie in simple geometry underscored by perfect proportions and subtle details.

The virtues of simplicity had been extolled already more than 300 years BC by the Greek philosopher Plato who writes in his work Republic: "Beauty of style and harmony and grace and good rhythm depend on simplicity."

And the Greek word for simple is Aplos.

The gently tapering stainless steel case with architecturally shaped lugs gives the Aplos optical subtlety and proudly shows that it was made using the most advanced metal machining methods. The bold crown balances perfectly on the thin line between a jewel and a cog.

The defining feature of the watch, however, is its face – the dial and the hands. The graphic layout of the dial is governed by the elongated polished hour indices that rise slightly above the surface. The long thin hands point to the indices from underneath the seconds hand whose stirring spoon silhouette is one of the strongest features of this model.

The movement inside the Aplos is an automatic caliber customised by our Swiss partner La Joux-Perret. Its sixty-eight-hour power reserve will enable the wearer to take the watch off for the whole weekend. The caliber is fitted with twenty-four jewels, it features heat blued screws and its rotor and bridge are decorated with Geneva stripes. The balance wheel is positioned at the sixth hour and can be seen through an aperture in the case back.

ROBOT

MINOR

The sporty ROBOT MINOR chronograph celebrates the triumph of the famous Czech racing car Aero Minor Sport, securing first place in its category at the 24 Hours of Le Mans race in 1949. This legend of Czech motorsport can still be seen on racing circuits or at vintage vehicle shows today.

Le Mans 49

The visually robust watch (44 mm) is very light and easy to wear thanks to its titanium case. The dial perforated with 3462 pinholes offering a partial view of the La Joux-Perret movement is only one of the unique features of this chronograph. The

layout of the dial and the hands evoke dashboard instruments, gear cog grooves decorate the crown and the rotor echoes the geometry of a wheel. Adding the finishing touch is the hand-stitched leather strap made by the Sima Prague studio.

The Minor chronograph movement is decorated with sunray sanding decoration and Geneva stripes. The design mirrors the racing details of the Aero Minor car, with the blue rotor reflecting the wheel disc geometry.

AERO MINOR SPORT RACE CAR

A racing car named simply Sport was created in 1949 on the shortened chassis of the existing Aero Minor II model. Two prototypes were produced, designed specifically for the legendary Le Mans race where they ran in the 750cc category with spectacular results.

Drivers Otto Krattner and František Sutnar raced under the number 58. With the performance co-efficient factored in they came second after the winning twelve-cylinder Ferrari. The 2,391 kilometres they covered and the average speed of 99.664 km per hour were the absolute best performance in their class.

As the new communist government was getting an ever-firmer grip on the society, the successful racers were not allowed to participate in the 1950 race. The authorities initially attempted to recruit them as spies and when they refused they were charged with treason and sentenced to long prison terms. Sutnar was released in 1963. He emigrated to Switzerland where he died in 1992. Krattner died in Czechoslovakia in 1979.

In 2018, the Le Mans Redux Company was founded to promote the Czechoslovak industry and design. The co-founders are Josef Zajíček, Michal Froněk and Jan Němeček. The company acquired an original Aero Minor Sport car, renovated it and returned it to the racing circuit. The ultimate goal of the project was the vehicle's participation in the Le Mans Classic race in 2022 which it completed successfully.

ROBOT

MINOR

KEY FEATURES

- sporty men's chronograph with an excellent car racing pedigree
- titanium case – visually robust (44 mm), yet very light
- pays homage to the legendary Czech racing car Aero Minor Sport
- 3462 perforations in the dial allow a partial view of the movement
- raised subdials made by electrodeposition
- skeletonised date wheel
- hand-finished hands: machined, partially polished and partially brushed hour and minute ones; polished seconds one
- hand-stitched leather strap made by the Sima Prague studio
- wide range of personalisation options (colour combinations of the dial, chronograph second hand personalised with monogram or another ornament, engraving or print (image or text on case back of the watch, engraved crown, colour of the strap, and more...))

ROBOT 

A WORD FROM THE AMBASSADOR

"When I look around I feel respect and responsibility for what our ancestors had built and left here for us to look after. We shouldn't see it merely as a duty but also as a source of joy. Keeping traditional crafts alive and living in harmony with nature and the architectural heritage inspires and fulfils me. Peace and good balance are the basic conditions for the work that requires absolute precision."

Karel Roden, actor

ROBOT

GRAPHIC SUTNAR

The watch ROBOT GRAPHIC Sutnar celebrates the nation's art and graphic design in general, with a special tribute to the avant-garde artist Ladislav Sutnar.

Sutnar achieved international fame and his work laid the ground for modern visual communication, design and typography. The key feature of this watch is its large dial with raised indices based on the artist's numerals designed for house numbers in the Bronx, New York, in the late 1950s. The Swiss-made self-winding mechanical caliber from Bohematic's partner La Joux-Perret is set in a round steel case.

On the wrist, the watch looks just the right size despite its large diameter of 42 mm. Further features that deserve a mention are machined hands, hand-applied Super-LumiNova and especially the bezel fixed with custom screws. There are seven colour versions of the dial and three / many finishes of the case. A hand-stitched strap from the leading leather studio Sima Prague complements the watch perfectly.

GRAPHIC SUTNAR

The first timepiece in the GRAPHIC series is a celebration of the best of Czech graphic design past and present and it pays tribute to the avant-garde designer Ladislav Sutnar. He has attained global fame and his work represents a major contribution to contemporary visual communication, design, and typography. Launching the model with the Sutnar mark resonates with the overall philosophy of this series. The dominant feature of the watch is a large dial with raised indices, complemented by a discreet case with unobtrusive lugs. The details of the dial, the shape of the hands and the design of the crown echo typical aspects of Sutnar's work, based on the rigorous application of geometric patterns and elegant modernist typography. The small aperture at the four o'clock position on the back of the watch provides a view of the balance spring. The hand-sewn leather strap is beautifully outlined by perfect stitching.

Born in Plzeň in 1897, Ladislav Sutnar is one of the leading figures of Czech interwar design. He later played a key role in the development of American and global decorative arts and graphic design. It is hard to find an area of applied arts in which he has not achieved success or broken new ground.

Sutnar devoted a big part of his private and professional life to teaching. His approach to graphic design was highly conceptual. Contrast, clear division of information, diagonal composition, original typography and the use of decorative functional elements and geometric forms are all typical features of his work.

„Good visual design aspires to uplift the public to an expert design level.“

An aperture on the caseback of the watch shows the heart of the mechanical movement.

ROBOT

GRAPHIC SUTNAR

KEY FEATURES

- inspirational original design
- dial with raised indices made by electrodeposition
- machined hands with hand-applied Super-LumiNova
- unique case assembly with the movement set from the top; custom screws fixing the crown
- aperture in the case back allowing a view of the balance wheel
- hand-stitched leather strap
- six colour versions; wide range of personalisation options (colour combinations of the dial, second hand personalised with monogram or another ornament, engraving or print (image or text on case back of the watch, engraved crown, colour of the strap and more...))

“Working on Analog inspired me to leave the graphic two-dimensional zone and work with typography in a new space.”

GRAPHIC ANALOG

ANALOG BLACK

ANALOG SILVER

The Analog watch is part of our GRAPHIC model range, it pays tribute to analog clock displays.

The concept of the dial and hands is the work of Radek Sidun, a leading Czech typographer who conceived his design of several inspiring sources from the 1970s. Although the ANALOG model is classically handed, at first glance it humorously resembles a digital mechanical

watch from before the advent of diode and crystal displays, flip clocks and information boards with printed flip plates. The watch is powered by a new generation Swiss automatic calibre and its case back newly features a large sapphire crystal which shows the calibre in its full glory.

ROBOT

AERODYNAMIC

The ROBOT Aerodynamic model, powered by a top-quality Swiss movement with 8 days of power reserve, is an elegant watch ideal to wear with a business suit. It pays homage to the world's first aerodynamically shaped mass-produced cars.

Tatra T77

The dial features a circular ribbed motif – a typical feature on the bodywork of the first Wikov 35 Kapka and Zbrojovka Z 4 aerodynamic cars. The dial also features a “fuel gauge” – the power reserve of the hand-wound movement – and a small seconds subdial at the six o'clock position. Complementing the dial's

aesthetics is the long, streamlined shape of the hands. The transparent case back affords a full view of the skeletonised bridge finished with decorative brushing. The 12.2 mm thick case is perfectly complemented by a hand-stitched leather strap. The watch won in its category at the Czech Grand Design awards.

The Swiss Made movement – customised for ROBOT watch with skeletonized bridge and sunray decoration – has a 8 days power reserve.

AERODYNAMIC

The AERODYNAMIC series watches commemorate a historic Czech design achievement

The 1930s was a time of a huge industrial boom. One of the areas that experienced tremendous growth was the automotive industry. Cars on American and European roads and highways were nothing new by then but it was not until the early 1930s that their designers realised they had fallen behind their modern architecture and industrial design colleagues. The contrast between the clean, austere lines of functionalist buildings and cars that looked like motor-powered chariots had to come to an end. The aerodynamic age had arrived!

But streamlined shapes didn't just fall out of the sky. Well, they kind of did, actually, because aircraft and airship manufacturers had already known for some time that streamlined shapes faced less air resistance and therefore moved faster and with less energy expended. One of the pioneers of the scientific study of aerodynamics was the visionary Hungarian-born designer Paul Jaray, who began his working career at Zeppelin, where he played a central role in the search for the ideal airship shape. Jaray's Czech footprint began before World War I when he worked as an assistant at the Technical University in Prague.

In Czechoslovakia, however, the centre of aerodynamics was not Prague or any other large city, but the town of Kopřivnice in North Moravia, where the talented designer Hans Ledwinka had been working since the end of the 19th century. On the threshold of the aerodynamic age, he had already achieved several engineering successes, especially the technical design of the automobile chassis

in the form of a backbone frame with swinging half-axles and an air-cooled engine. Ledwinka invited Jaray to collaborate with him in the early 1930s and together they began to design a car for a new era. After a few prototypes, a car the world had never seen before was born: the aerodynamic Tatra T77, the first ever mass-produced car with a streamlined body. The design was introduced to the public in 1934. A period advertisement explained the advantages of the aerodynamic shape by saying that there was nothing for the "evil wind" to cling to...

The T77 was followed by T87 and T97 models before the start of World War II, and then by the popular Tatra T87 after the war. The Tatra T87 was made famous by the legendary Czech travellers Hanzelka & Zikmund, who explored Africa and South America with it between 1947 and 1950.

So what was the story with the Beetle? We know that Ferdinand Porsche looked over the shoulders of Ledwinka and Jaray. He and Ledwinka even knew each other and consulted together on some of the details of their designs. There is a photograph of Ledwinka with Porsche and the famous Czech car racer Eliška Junková. Porsche's designs for the KdF-Wagen, which later assumed the name Volkswagen Beetle, clearly drew on Ledwinka and Jaray's Tatrás, not only aesthetically but also structurally, as they are also built on chassis with backbone frames, swinging half-axles and rear-mounted, air-cooled engines. Tatra wanted to sue Volkswagen for design infringement but the occupation of Czechoslovakia by Nazi Germany put a stop to that. However, the original owners of the Tatra company, the Ringhoffer family, eventually got at least some justice when Volkswagen settled out of court in the 1960s. There is simply no doubt about it: Tatra got there first!

A WORD FROM THE AMBASSADOR

„The Aerodynamic series reminds us of an important design milestone. Sharp edges and right angles dominated car and motorcycle design until the early 1930s the Czechoslovak Tatra 77 - the world's first aerodynamically shaped mass-produced car—came along.“

Michal Froněk, designer, Olgoj Chorchoj studio

ROBOT

Minor Emerson Fittipaldi

Limited edition of 100 pieces
handsigned by the racing legend.

The ROBOT MINOR watch is a true masterpiece for a passionate petrolhead. Driven by a Swiss movement and created in our ROBOT manufacture workshop, this limited edition Emerson Fittipaldi watch was designed with active participation of the legend of motorsport to celebrate the 50th anniversary of his first F1 championship victory.

The black and gold scheme references the colours of Fittipaldi's Lotus car in the livery of JPS, the team's title sponsor. The font of the monogram EF on the second hand echoes the characteristic serif typeface used on the famous race car. Each of the 100 specially perforated dials carries Emerson

Fittipaldi's original signature. The sapphire case back is adorned with the silhouette of the Lotus car and an inscription commemorating its overall victory in the championship in 1972. The black and gold scheme continues on the hand-sewn black leather strap with decorative stitching in gold thread.

MINOR SUPERBIKE

Limited Edition 12 pieces

This limited-edition entitled SUPERBIKE pays homage to a racing circuit event, although this time it's an exceptional performance on a motorcycle and a historic moment for the racetrack in Most, the Czech Republic.

In early August 2021, the circuit marked a historic moment as it hosted its first-ever World Championship race in its forty-year history: the WorldSBK competition of superbikes. To host the event, the track underwent a significant upgrade including resurfacing and extending safety zones and run-off areas. It was on this upgraded circuit that British rider Jonathan Rea established a new track record.

of 1:31.996 minutes on a Kawasaki motorcycle and Pirelli tyres. The limited edition of 12 watches features the silhouette of a superbike on the seconds hand and the layout of the Most race circuit on the transparent case back. Each timepiece comes with a keyring made out of a strip of the tyre on which the record was achieved.
